

Efficient Asset Management

The dynamics of modern businesses make active operation and administration of their infrastructures increasingly important.

Active, demand-driven management of real estate, equipment and facilities is an essential requirement if the operator is to focus on its core business under optimal conditions.

Consequently, planning, procurement, operation and maintenance of property and equipment are among the increasingly important services provided by SBB Cargo AG.

The Client

- SBB Cargo AG, CH-Basel
- Business Unit Asset Management:
Ensuring the availability and safety of the rolling stock
- Number of employees: approx. 4'400

The Objective

- Sustaining the functionality of the infrastructure needed to maintain the rolling stock
- Make the required workshop capacities available

The Solution

- Implement the new locations concept comprising one industrial plant, five service facilities and several mobile units.
- Generate a future oriented and sustainable operations and maintenance concept.
- Organise the buildings and equipment at the individual sites to match the requirements imposed by new rolling stock.

The Client Benefits

- The workshops have infrastructures that optimally match their tasking profiles.
- The improved work processes and new equipment allow higher productivity.
- The long-term value conservation of building, facilities and equipment is ensured.
